

Table Assignment #4 – Order Table

Scenario:

You are working as a junior front-end developer for an **online electronics store**. Your manager has asked you to build a **responsive order table** where customers can see the details of their past purchases.

This table should look **neat, structured, and styled** using HTML & CSS.

Steps to Build the Project

Step 1: Create the Page Structure

- Make a new folder: `css-assignment-4`.
 - Inside it, create two files:
 - `index.html` → will contain the table structure.
 - `style.css` → will contain the CSS for styling.
 - Link your CSS file in the HTML using:
 - `<link rel="stylesheet" href="style.css">`
-

Step 2: Create the Table

- Add a table with these **columns (headings)**:
 1. Date
 2. Order ID
 3. Name (product name)
 4. Price
 5. Quantity
 6. Total
 - Fill at least **5–6 rows** with example data (like the screenshot).
 - Example products: *iPhone X, Samsung S8, USB Cable, Macbook Pro, Smartwatch*
-

Step 3: Style the Table with CSS

- Add a **background gradient** (purple to pink) behind the table.
- Make the table background **white** with rounded corners.

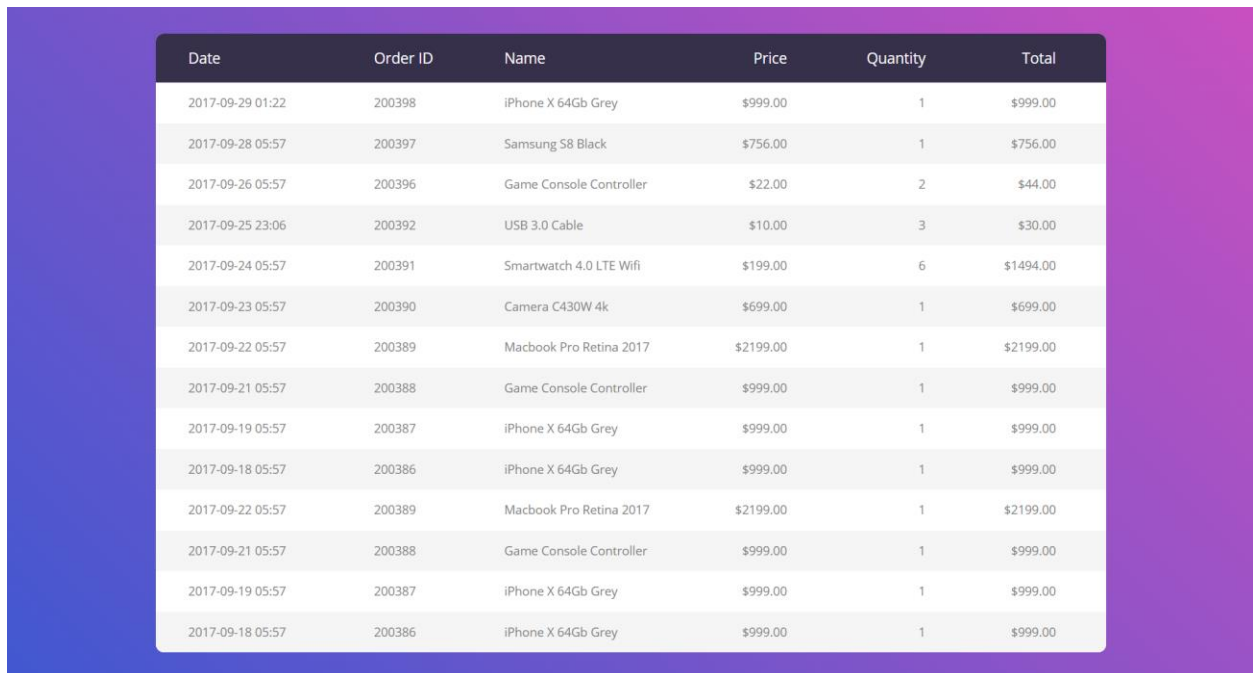

- Table header (<th>) should have a **dark background** with white text.
- Alternate row colors for better readability (like light grey for every second row).
- Add padding and spacing so text is not too close.

Instructions for Students

1. Create the folder and files as explained.
2. Write **HTML first** (the table and rows).
3. Then, move to **CSS styling** (colors, fonts, spacing).
4. Open the file in your browser to see the result.
5. Submit your project (ZIP file or live demo).

Website Preview

Here's how your output should look after finishing:

Date	Order ID	Name	Price	Quantity	Total
2017-09-29 01:22	200398	iPhone X 64Gb Grey	\$999.00	1	\$999.00
