

HTML FINAL ASSESSMENT PROJECT

Project Description

You have completed HTML Fundamentals and are now required to build a complete **Personal Portfolio & Learning Journey Website** using **HTML only**.

This project is designed to evaluate your understanding of HTML structure, semantic elements, forms, multimedia, tables, accessibility, and best coding practices.

Your website should represent you as a learner and showcase your educational journey, skills, projects, goals, and achievements.

Project Objectives

By completing this project, students should demonstrate:

- Proper HTML5 document structure
 - Usage of semantic and non-semantic elements
 - Creation of forms and tables
 - Multimedia integration
 - Accessibility best practices
 - Proper organization and indentation
 - Real-world website structure
-

Mandatory Requirements Checklist

1. HTML Document Structure

Use all of the following:

- DOCTYPE declaration
- html tag
- head tag
- title tag
- meta charset
- meta viewport

- body tag
-

2. Text Formatting Elements

Include examples of:

- h1 to h6
 - p
 - br
 - hr
 - strong
 - em
 - b
 - i
 - mark
 - small
 - sup
 - sub
-

3. Navigation & Links

Create a navigation menu using internal links.

Include:

- Internal page links
- External website links
- Email link

Example Sections:

- Home
 - About
 - Skills
 - Projects
 - Multimedia
 - FAQ
 - Contact
-

4. Images

Include:

- Profile image
 - At least 3 additional images
 - Proper alt attributes
 - figure element
 - figcaption element
-

5. Lists

Use:

Ordered List

Display learning roadmap.

Unordered List

Display skills.

Nested List

Display categories and subcategories.

Description List

Display technical terms and definitions.

6. Projects Table

Create a table containing:

Project Name Technology Completion Date Status

Requirements:

- caption
- thead

- tbody
- tfoot
- rowspan
- colspan

Minimum 5 project entries.

7. Contact Form

Create a complete form containing:

- Full Name
- Email
- Password
- Age
- Date of Birth
- Gender (Radio Buttons)
- Skills (Checkboxes)
- Country (Dropdown)
- Message (Textarea)
- Submit Button
- Reset Button

Use required validation wherever appropriate.

8. Semantic HTML Elements

You MUST properly use:

- header
- nav
- main
- section
- article
- aside
- footer
- figure
- figcaption

Avoid using div everywhere.

Use semantic elements whenever possible.

9. Non-Semantic Elements

Demonstrate proper usage of:

- `div`
 - `span`
-

10. Multimedia Section

Include:

Audio

Embed one audio file.

Video

Embed one video file.

YouTube Video

Embed one YouTube tutorial using `iframe`.

Additional Iframe

Embed Google Maps or another webpage.

11. Progress Tracking Section

Include:

Progress Element

Example:

- HTML Learning Progress

Meter Element

Example:

- Daily Productivity Level
-

12. FAQ Section

Create at least 5 FAQs using:

- details
 - summary
-

Website Sections

Home

Include:

- Welcome message
 - Profile image
 - Short introduction
-

About Me

Include:

- Education
 - Interests
 - Goals
-

Skills

Include:

- Technical Skills
 - Soft Skills
-

Learning Journey

Include:

- Technologies learned
 - Learning roadmap
-

Projects

Include project table and descriptions.

Multimedia

Include audio, video, and embedded content.

Daily Progress

Include progress and meter examples.

FAQ

Include common questions about yourself.

Contact

Include complete contact form.

Footer

Include:

- Social media links
 - Email link
 - Phone number link
 - Copyright
-

Coding Standards

Students must:

- ✓ Use meaningful content
 - ✓ Use proper indentation
 - ✓ Add comments before every section
 - ✓ Use semantic HTML wherever possible
 - ✓ Write clean and readable code
 - ✓ Ensure valid HTML5 structure
-

✗ Restrictions

Students are NOT allowed to use:

- CSS
- Bootstrap
- Tailwind CSS
- JavaScript
- jQuery
- React
- AI-generated complete solutions

HTML ONLY.

Bonus Challenges

Complete any of the following:

1. Create a downloadable resume link.
2. Embed Google Maps.
3. Create a weekly study timetable using rowspan and colspan.
4. Add 10 FAQ items.
5. Create a gallery with at least 10 images.
6. Add a "My Achievements" article section.
7. Add a "Latest Learning Tips" aside section.
8. Create a complete sitemap using internal links.
9. Add a portfolio section containing at least 5 projects.
10. Ensure all navigation links work correctly.

Best of Luck!

Remember:

A good developer writes code that both computers and humans can easily understand.
