

HTML Assignment #3 – A Blog Article Page with Semantic Markup

What is Semantic Markup?

Semantic HTML means using tags that **clearly describe the meaning of the content** inside them. For example, instead of just using `<div>` for everything, we use tags like `<header>`, `<article>`, or `<footer>` to show what each part of the page is about.

✓ *Why is Semantic Markup Important?*

- It makes your code **easier to read and understand**
- Helps **browsers and search engines** know what your content means
- Helps people using **screen readers** or accessibility tools
- It's a **best practice** for professional web developers

Scenario:

You are now working as a **junior web developer**.

Your client is a **blog writer** who wants you to build a small part of their article page using **semantic HTML** and proper formatting.

The article is about "**The Importance of Sleep**".

Client Requirements:

Your HTML page should include the following:

1. Use proper **semantic tags** like:
`<header>`, `<main>`, `<article>`, `<footer>`
2. Inside the `<article>`, add:
 - A **heading** (`<h1>`) for the blog title:
The Importance of Sleep
 - A **short paragraph** with **important words highlighted** using:
 - `<strong>` for important/serious words
 - `<em>` for emphasis

Example idea:

"Getting enough sleep is very important for your health.
It helps your body recover and stay focused."

3. Add a **quotation** from a doctor using:
 - o <blockquote> for long quote
 - o <q> for short quote inside a sentence

Example:

A doctor once said:
<blockquote>Sleep is not a luxury. It is a necessity for
the human body and mind.</blockquote>

4. Use the <abbr> tag to explain a short form:
 - o Example: REM should appear like:
REM <abbr title="Rapid Eye Movement">REM</abbr>
5. Use the <cite> tag to mention the source of the article:
 - o Example: Written by <cite>Dr. Smith</cite>
6. Add a line using <address> at the bottom of the page:
 - o Example:

```
kotlin
CopyEdit
Written by Dr. Smith
Contact: drsmith@email.com
123 Sleep Street, Dream City
```

7. Add a paragraph with a mistake shown using and <ins>:
 - o Example:

"Experts say we need at least 6 <ins>8</ins> hours of sleep
every night."

Instructions:

- Create a new folder: html-assignment-3
- Inside it, create a file: index.html
- Use **semantic and meaningful tags** to structure the page properly
- View the file in your browser (Copy Path → Paste in browser)
