

HTML Assignment #5 – Creating a Product Price List Using Tables

Scenario:

You are hired by a **small electronics store** to build a web page that displays their **product price list**.

The store owner wants the data displayed in a **clean, structured table**, and the table should be easy to read and well organized.

You'll also practice working with **headers, rows, and special formatting** for long or complex tables.

What You Will Learn in This Assignment:

- How to create a table with rows and columns
 - When to use table headers (<th>) vs regular cells (<td>)
 - How to merge cells using `colspan` and `rowspan`
 - How to divide long tables using `<thead>`, `<tbody>`, and `<tfoot>`
 - When to use tables (good for data like prices, schedules, reports)
-

Client Requirements:

Create an HTML page named `products.html` that includes:

1. **A heading:** `ElectroMart - Product Price List`
2. **A table with the following structure:**

Basic Structure:

- Use `<table>`, `<tr>`, `<td>`, and `<th>`
- Include a **header row** using `<thead>` that shows:
| Product | Category | Price | Stock |
- Use `<tbody>` to add **at least 4 rows** of products (real or fake names)
- Use `<tfoot>` to show a **summary row** like:
`Total Products: 4`

Example of Complex Structure:

- Use `colspan` to merge header cells if needed
 - Use `rowspan` for repeated categories (e.g., 2 phones under the same category)
 - Make the table **easy to read**
-

Table Example Idea (Structure):

Product	Category	Price	Stock
Samsung A14	Mobile	\$250	Yes
iPhone 13		\$799	No
HP Laptop 15	Laptop	\$650	Yes
MacBook Pro		\$1200	No

Use `rowspan` on "Mobile" and "Laptop" if showing two rows under the same category.

Instructions:

- Create a new folder: `html-assignment-5`
 - Inside the folder, create: `products.html`
 - Use proper table structure (`<thead>`, `<tbody>`, `<tfoot>`)
 - Use `colspan` or `rowspan` where needed
 - Open the file in the browser and check that the table looks neat and easy to read
-

What You Will Practice:

- Creating tables with real-world data
- Merging rows and columns
- Organizing long tables for clarity
- When and where to use tables effectively
