

HTML Assignment #6 – Job Application Form Using HTML5 Form Elements

Scenario:

A small company wants to create a **Job Application Form** on their website so people can apply online.

They've hired **you** as a web developer to build a simple but complete form using **modern HTML5 input types** and controls.

The form should collect personal details, job preferences, a resume upload, and include **basic validation**.

What You Will Learn:

- How to build real-world forms to collect user information
 - Using form controls like text input, radio buttons, checkboxes, select boxes
 - Grouping form sections with `<fieldset>` and `<legend>`
 - Using `<label>` with `for` attributes to improve accessibility
 - New HTML5 input types: `email`, `date`, `url`, `search`
 - File uploads and image buttons
 - Form validation (required fields, input types)
-

Your Task:

Create an HTML file named `job-form.html` and include the following form elements:

Form Sections & Fields:

1. Personal Information (`<fieldset>`)

- Full Name: (*text input*)
- Email Address: (*HTML5 email input*)
- Phone Number: (*text input*)
- Website or Portfolio: (*HTML5 url input*)
- Date of Birth: (*HTML5 date input*)

2. Job Details (<fieldset>)

- Job Position (dropdown):
 - Frontend Developer
 - Backend Developer
 - UI/UX Designer
 - QA Engineer
- Preferred Work Location (radio buttons):
 - On-site
 - Remote
 - Hybrid
- Skills (checkboxes):
 - HTML
 - CSS
 - JavaScript
 - React
 - Node.js
- Resume Upload: (*file input*)
- Write About Yourself: (*multi-line textarea*)

3. Extra Section (<fieldset>)

- Search your favorite tech stack: (*HTML5 search input*)
- Password: (*password input*)
- Confirm Password: (*password input*)
- Use an image as a submit button or keep a normal Submit button

Required Attributes & Validation:

- Mark all **important fields as required**
- Use **placeholder text** where needed
- Use **labels properly** with `for` attribute for accessibility
- Ensure correct input types (e.g., email, date, url, search)

Instructions:

- Create a new folder: `html-assignment-6`
- Inside it, create a file: `job-form.html`
- Build a form with all the fields listed above
- Use `<fieldset>` and `<legend>` to group related sections
- Apply basic HTML5 validation
- Open the file in a browser and test by filling the form

What You Will Practice:

- Building real and useful forms
- Using all major HTML input types and controls
- Grouping and organizing forms properly
- Making forms accessible and user-friendly
- Using validation to ensure correct data
