

CSS Assignment #2 – Fashion Store Preview Website

Scenario:

You are creating a small **Fashion Store website** to showcase products, display upcoming sales, and tell users why they should choose your store. Finally, you'll add a footer to mark copyright information.

You will **first write HTML** (the structure of the page), then **use CSS** (to style and decorate the page).

Steps to Build the Project

Step 1: Create the Navbar

- At the very top, create a **navbar** with the heading "**FASHION STORE**".
 - Under the heading, add a **row of product categories** (T-Shirts, Sun Glasses, Shirts, Shoes, Pants, Perfumes).
 - Each category should have:
 - An **image icon** of the item
 - A **label text** (e.g., T-Shirts, Shoes, etc.)
-

Step 2: Add a Shopping Banner

- Create a **large banner section** with a shopping cart image (like “Shopping Time” in the screenshot).
 - This will represent a **promotion or advertisement area** for the website.
-

Step 3: Upcoming Sales Table

- Below the banner, create a **table** titled "**OUR UPCOMING SALES**".
- The table must have these columns:

1. Festival
 2. Discount (showing old discount crossed out and new discount highlighted)
 3. Starting Date
 4. Ending Date
- Example rows: Independence Day, Diwali, Christmas, New Year.
-

Step 4: Add Description About Store

- Add a section with a **heading and description** text:
 - **"Fashion Store: The One-stop Fashion Destination"**
 - Write about why shopping with this store is beneficial.
-

Step 5: Add Festival Sale Info

- Below the description, add a short **list of festival sales** (Independence Day Sale, Diwali Sale, Christmas Sale, New Year Sale).
-

Step 6: Add Payment Options Info

- Add a **section explaining payment options** like UPI, Credit/Debit card, EMI, and Cash on Delivery.
-

Step 7: Create the Footer

- At the very bottom, create a **footer section** with text like:
 - "© 2012-2023 FashionStore.com"
- Center align this footer.

Instructions:

1. Create a new folder: `css-assignment-2`
2. Inside it, make two files:
 - `index.html` (HTML structure)
 - `style.css` (CSS styling)
3. Link the CSS file in your HTML using:

4. `<link rel="stylesheet" href="style.css">`
5. Build each step one by one (HTML first, CSS later).
6. Open the page in your browser and check the result.
7. Also submit your final output in assignment

Website Preview

Here's how your website should look after completing this assignment:
