

Form Assignment #3 – Contact Form (Send Us A Message)

Scenario:

You will build a clean **Contact Form** page like the screenshot and live example provided. The form will let visitors send their **name**, **email**, **phone**, and a **message**. First create the HTML structure, then add CSS to style it (rounded inputs, centered form, and a styled submit button).

Steps to Build the Project

Step 1: Page Header

- Add a centered heading at the top: **SEND US A MESSAGE**.
 - Make the heading bold and larger than other text.
-

Step 2: Create the Form Structure

- Use a `<form>` element for the contact form.
 - Inside the form add these fields with proper `<label>` and `for` attributes:
 1. Full Name — single-line text input (`<input type="text">`)
 2. E-mail — use `type="email"` so browser can validate email
 3. Phone — use `type="tel"` (optional pattern for digits)
 4. Your Message — `<textarea>` for multi-line message
 - Give each input a placeholder (example: Full Name) and set important fields as required.
-

Step 3: Add the Submit Button

- Add a submit button with the text **SEND**.
 - Optionally add a small icon inside the button (paper-plane or send).
 - Use `<button type="submit">` so it works without JavaScript.
-

Step 4: Grouping & Accessibility

- Use `<label>` for every input and connect with `for` attribute.
 - Wrap form fields in a container and use spacing between fields.
 - Ensure good keyboard order and visible focus style (outline on focus) for accessibility.
-

Step 5: Styling with CSS

- Create a light grey page background (example: `#f3f3f3`).
 - Center the form horizontally on the page and give it top spacing.
 - Style inputs and textarea to be **white, rounded, and large** (like the screenshot).
 - Add spacing (margin) between each field.
 - Style the SEND button with a purple background and white text; add padding and rounded corners.
 - Make the form responsive so it looks good on mobile (reduce width and padding on small screens).
-

Step 6: Extra (optional but recommended)

- Add basic HTML5 validation (use `required`, `type="email"`).
 - Add `maxlength` to message if you want a limit.
 - Show a small success message or use browser default behavior (you can show a simple `alert()` if using tiny JavaScript — optional).
-

Instructions:

1. Create a new folder: `form-assignment-1`
2. Inside it, make two files:
 - `index.html` (HTML structure)
 - `style.css` (CSS styling)
3. Link the CSS file in your HTML using:
4. `<link rel="stylesheet" href="style.css">`
5. Build HTML first, then CSS.
6. Open the page in your browser and check the result. (Right-click → Copy Path → Paste in browser)
7. Also submit your final output (ZIP or link to live demo) with your assignment.

Website Preview

Here's how your form should look after completing this assignment:

The image shows a contact form on a light gray background. At the top, the text "SEND US A MESSAGE" is centered in a bold, dark blue font. Below this, there are four input fields, each with a light gray border and rounded corners. The first field is labeled "Full Name", the second "E-mail", the third "Phone", and the fourth "Your Message". The "Your Message" field is a larger text area. At the bottom center, there is a blue button with a white paper plane icon and the word "SEND" in white capital letters.

What You Will Learn:

- How to build a complete contact form using HTML
 - How to use form fields: text, email, tel, textarea, and buttons
 - How to make forms accessible with labels and focus states
 - How to style forms with CSS: layout, rounded inputs, colors, and responsive design
 - How to add simple HTML5 validation
-
